

# Babduli Pty Ltd

*The Liugong Wheel Loader - is a reliable and cost effective alternative!*

For the past 15 years, Babduli Pty Ltd, have provided efficient and economical sand washing services for concrete plants.

Owner/Manager, Trevor Daniells, told us that when he decided that he needed a new wheel loader, he had researched the market and “was going to buy a second hand Cat but it was too expensive. The Liugong 856 Wheel Loader from Heavy Metal Machinery was a lot cheaper and is brand new, so it is very cost effective”.

An outstanding factor with this loader is that it has good specifications especially the Cummins engine, which is reliable and so easy to get parts for. It also has good running gear, so it's easy to repair which means less downtime. Primarily we are using it for loading sand onto washers and for loading the trucks.

It is twice the size of the loader we had been previously using and more than twice as efficient. It's a lot quicker and a lot easier to maintain, with easily accessible service points. So Far so Good. This one has a 3metre bucket and the last one had a 1.5metre bucket, so it has very good capacity compared to the previous bucket.

The Liugong has a very comfortable cab with all the required safety aspects and great lever positioning. It moves around sites with ease, has good visibility and overall, it is a nice, quiet machine.

The fuel efficiency is good, I will be very happy with it if it keeps going the way it has been for its first 100 hours. It has plenty of power, is very stable and is as good as any loader I have driven and I have been operating machinery since 1965. This Liugong wheel loader is a cost effective, reliable machine that performs really well.

John Sexton, from Heavy Metal Machinery is excellent to deal with; he's always readily available, easy to get in contact with and provides really good service and support.
